

Multivariable, Non-Linear and Optimal Control

Laboratory Work Evaluation Criteria

1. **Active participation** in the work carried out in laboratory classes and knowledge of all students about all the work carried out.
2. **Adequacy of answers** to questions in the work guide
 - a) The responses must fully answer the problem at hand.
 - b) Conciseness. Use concise text that fully expresses the answer.
 - c) Clarity. The text and its articulation with the figures included in the report must be clear. If variables not defined in the guide are used, they must be defined in the report.
 - d) Technical correctness. There should be neither errors in the answers, nor in the use of concepts.
 - e) Critical analysis of the results. Do the results make sense in light of what is known and/or when compared to each other? What is the interpretation of the results?
3. **Imagination and originality** in the answers and the way they are presented. In depth exploration of the problem.
4. **Text correction** and style elegance.
 - a) There must be no spelling or syntax errors.
 - b) Preferably use short and clear sentences
 - c) Well articulated text
 - d) Proper punctuation, including correctly punctuation of the equations
5. **Readable and informative graphics**
 - a) Identify the axis with the corresponding variables and units
 - b) Appropriate font in the axes (not too small or too big, type 14 is suggested).
 - c) Use adequate scales, in order to show the important part of the evolution of the curves and/or the global evolution of the variables, depending on the situation.
 - d) Do not hide important parts of curves with labels.
 - e) Graph size suitable for what you want to show.
 - f) Graph legends that clarify the main aspect of the graph.
6. **Clear, well-structured, and well documented programs and SIMULINK diagrams**
 - a) Correction of programs and SIMULINK diagrams
 - b) Good structuring of programs and SIMULINK diagrams
 - c) Adequate and well distributed comments
 - d) Good program and SIMULINK diagram intelligibility
 - e) Clarity (appropriate and short variable names, explanation of variables with comments).
